

BIMEG

IT SECURITY SYSTEMS

Thank you for your interest,

the importance and timeliness of protecting the company's data, its customers, and its efficiency in the rapidly evolving cyber world of threats are crucial.

We independently design, create, test under full load, continue development, and maintain our high-end solutions. In our operating systems and software solutions, we calculate every detail to guarantee you the highest and most precise efficiency.

Our services according to ISO/IEC 27001:2022:

1. IT Audit - Security status/quality control and expert opinions.
2. Fundamental and in-depth IT security concepts.
3. Server security check (penetration test, overload test, attack simulation).
4. Software security check for the source code of online projects (PHP, MySQL DB, etc.), improvements, modifications.
5. Load balancing, load/traffic distribution between regions, data centers, and servers.
6. Security configuration of web, mail, apps API, and DB servers based on Unix.
7. Configuration of a Unix-based firewall (protection of corporate networks and individual servers) against brute force, DDoS, and other types of attacks.
8. XDR and SIEM solutions.
9. Automated individual solutions for online business tasks.
10. Encrypted data backup and data recovery/secure deletion.
11. 24/7 monitoring of services and servers.

The first security check of your project is free.

Please contact us, and we will be pleased to assist you.

Your Bimeg Team.
